Dear Mr. Butler:

LED ROAD SAFETY FLARES

The Albany Police Department recently purchased LED Road Safety Flares for each of our patrol vehicles and many of our support vehicles. The LED Flares have held up very well in the field. They have been driven over by fire apparatus as well as semi-trucks and we have not lost one from damage yet. The LED Flares are rated to last for ten hours per battery and we have been pleased with the actual results. We are able to utilize the same LED Flares for numerous crash scenes before replacing the batteries.

The LED Flares also solve some negative issues caused by traditional flares. Because traditional flares produce flame, they have caused damage to uniforms, equipment, and surroundings. Traditional flares also leave debris at the crash scene. Traditional flares do not function if they get wet. The LED Flares solve these issues while also providing excellent lighting/direction at crash scenes.

We have been very pleased with the LED Road Safety Flares and the service provided by SB Enterprises. Thank you for providing an excellent product at a competitive price.

Sincerely,

A handwritten signature in black ink, appearing to read 'Jeff Hinrichs', written over a horizontal line.
